

All Pro Thornton Deck Builders Expands Custom Deck Services

June 24, 2026

THORNTON, CO - June 24, 2026 -

All Pro Thornton Deck Builders has expanded its custom deck services, giving Denver Metro homeowners access to personalized outdoor designs and certified material installation. The Thornton-based company, in operation since 2012 as a licensed, bonded, and insured Colorado contractor, holds authorized installer status with Trex, TimberTech, and AZEK – three widely recognized names in residential composite and PVC decking. The expanded service is now available across more than a dozen Denver Metro communities, including Aurora, Westminster, Arvada, and Broomfield.

The expansion addresses growing homeowner interest in functional outdoor living spaces that also add measurable property value. According to residential real estate data, a professionally constructed deck can return between 65 and 75 percent of its construction cost at resale, while composite decking materials carry manufacturer-rated lifespans of 25 to 50 years. All Pro Thornton Deck Builders manages the full scope of each project, from initial design consultation through Adams County permit coordination and final deck installation.

According to David Miller, Owner of All Pro Thornton Deck Builders, the expansion is built around the

understanding that outdoor projects require individualized planning. "Every yard is different, and every family uses their outdoor space in a different way," David Miller said. "A custom deck should be designed around those realities ? not built to a template. That focus on the individual home and the individual homeowner is what makes the finished structure worth the investment."

The service gives clients access to a full range of structural configurations, including single-tier platforms, multi-level decks, wraparound builds, and floating deck systems, alongside finishing options in wood, aluminum, glass, and cable railing styles. Available materials include Western Red Cedar, pressure-treated lumber, Trex Transcend® composite planks, and AZEK PVC decking, each suited to different budget ranges and long-term maintenance preferences. The company coordinates all required permits directly, supported by its Adams County permit-ready designation.

The company's approach to each project begins with an on-site consultation in which a member of the All Pro Thornton Deck Builders team assesses the property layout, sun and shade exposure, and the homeowner's intended use for the space before a single design element is proposed. That site-first methodology informs decisions about structural placement, material selection, and feature integration, reducing the likelihood of design revisions once construction is underway. The company also prepares written estimates at no cost, giving homeowners a documented scope of work before any commitment is made.

Colorado's climate presents construction considerations that distinguish regional deck projects from those in milder markets. Elevation, UV intensity, and the temperature range between summer afternoons and winter evenings accelerate wear on lower-grade materials, a factor the company addresses through its use of manufacturer-certified composite and PVC products engineered for high-altitude outdoor use. All Pro Thornton Deck Builders also installs covered configurations and pergola integrations that extend usable outdoor living space into the region's shoulder seasons.

Demand for dedicated outdoor construction has grown steadily across the Denver Metro region in recent years, driven by increased homeowner interest in outdoor entertaining, dining, and recreation areas that function as extensions of interior living space. All Pro Thornton Deck Builders has completed residential projects across the full range of property types during its years of operation, from compact urban lots to larger suburban properties throughout Adams, Broomfield, and Jefferson counties. The company's project model is built around single-point-of-contact management, meaning homeowners work with the same team from the initial site visit through final inspection and permit close-out.
